SUMMARY

Data Engineer with over five years of experience building and optimizing scalable data solutions across healthcare and financial industries. Proficient in cloud-based data engineering, data architecture, and ETL pipeline development using AWS, Azure, and Snowflake. Skilled in Python, SQL, and Kafka for ingesting, transforming, and analyzing large-scale datasets. Experienced in data governance, CI/CD automation, database optimization, and real-time streaming architectures. Strong focus on delivering clean, reliable, and accessible data to support business intelligence and decision-making.

Work Experience

Fitch Ratings

August 2023 – present

Data Engineer

United States

- Developed a real-time data ingestion pipeline using **Python** and **Kafka** to process high-volume financial data for risk forecasting, reducing latency and improving response time by **40%** through structured storage in **PostgreSQL on AWS**.
- Automated reporting workflows using **Python** and **SQL**, cutting delivery time by **50%** and increasing stakeholder trust through enhanced data accuracy.
- Implemented **automated data quality checks and schema validation** within ETL pipelines using Python and SQL, enabling early detection of anomalies and reducing data load failures by **40%**.
- Designed and maintained **CI/CD pipelines using Bamboo**, reducing deployment cycles by **40%** and minimizing manual steps in production updates.
- Orchestrated end-to-end **data workflows using Apache Airflow**, enabling automated scheduling, monitoring, and dependency management for ingestion pipelines.
- Designed and optimized **Amazon Redshift data warehouse schemas (star and snowflake models)**, improving query performance and analytical efficiency on datasets with **millions of records**.
- Performed end-to-end **data migration to Snowflake** from legacy warehouses, ensuring high availability, minimal downtime, and complete data integrity during the transition.
- Managed and enhanced enterprise-wide analytics solutions, improving **data consistency, integrity, and accessibility** for business users and compliance teams.
- Collaborated cross-functionally with **risk, compliance, and analytics teams** to deliver secure, audit-ready data solutions aligned with regulatory reporting standards.

Technologies Utilized: Python, SQL, Apache Kafka, Apache Airflow, PostgreSQL, Amazon Redshift, Snowflake, AWS S3, Bamboo (CI/CD), Git.

Citibank

January 2021 – August 2022

Data Engineer

Mumbai, India

- Developed and orchestrated scalable ETL pipelines using **Azure Data Factory** and **Azure Databricks**, processing 15+ million financial records weekly, which improved pipeline stability by 35% and reduced manual interventions.
- Implemented the **Medallion Architecture (Bronze, Silver, Gold layers)** in Azure Databricks, enabling structured data refinement and resulting in a 60% reduction in downstream bug reports from analytics teams.
- Designed and optimized **PySpark workflows** for preprocessing transaction records, reducing transformation time by 40% and enabling risk models to refresh data 1 hour faster daily.
- Automated ingestion and transformation workflows with ADF mapping data flows, cutting overall pipeline execution time by 40% and improving reliability for daily data loads.
- Built reusable templates in ADF to integrate 10+ data sources, reducing development time for new pipelines by 30%.
- Improved query performance in **Azure SQL Data Warehouse** by rewriting inefficient SQL logic, achieving 60% faster execution for critical financial dashboards.
- Collaborated with finance and compliance teams to refine Gold-layer datasets, ensuring 100% alignment with internal audit standards and enhancing data traceability.
- Integrated CSV and legacy DB2/AS400 data sources into Azure Data Factory pipelines, enhancing coverage for enterprise-wide reporting.
- Integrated **Power BI** with curated Gold datasets, increasing self-service report adoption by 70% and reducing ad hoc reporting requests by 50%.
- Documented data lineage and pipeline specifications, reducing onboarding time for new engineers by 50% and improving long-term project maintainability.

Technologies Utilized: Azure Data Factory, Azure Databricks, PySpark, SQL Server, Snowflake, Power BI, Azure Blob Storage, Medallion Architecture, JIRA, Power Query, Python.

Tezo **July 2019 – January 2021**
Data Engineer *Hyderabad, India*

- Designed and developed scalable ETL pipelines using **Informatica** to ingest and consolidate healthcare claims and patient data from multiple sources, enabling faster report generation and improving data availability for clinical decision-making by **35%**.
- Extracted and transformed healthcare CRM data from **Salesforce** using **Python and SQL**, streamlining access to patient profiles and improving provider engagement tracking across regions.
- Optimized high-volume **MySQL** queries on datasets exceeding **10 million records** using indexing and query refactoring, reducing execution time by **40%** and enhancing responsiveness of provider performance dashboards.
- Built advanced **SQL queries with window functions, CTEs, and subqueries** to calculate key metrics such as treatment adherence, appointment no-show rates, and readmission trends, supporting data-driven interventions by care managers.
- Performed extensive data cleaning and schema validation using **Python (Pandas, NumPy)**, increasing overall data quality and reducing report inconsistencies by **30%** for regulatory and clinical reporting.
- Collaborated with compliance and governance teams to ensure HIPAA compliance, resulting in successful audits and secure handling of 5M+ patient records.
- Developed Excel-based monitoring dashboards for ingestion pipelines and validation checks, reducing data incident response time by **50%** and enabling non-technical users to independently verify data loads.
- Documented ETL workflows, data dictionaries, and logic definitions to support healthcare metrics, cutting onboarding time by 40% and improving maintainability of legacy systems.
- Designed and deployed interactive **Power BI dashboards** to visualize patient engagement, readmission trends, and treatment adherence, improving clinical team visibility and enabling faster data-driven decisions by **25%**.

Technologies Utilized: Python (Pandas, NumPy), SQL, MySQL, Informatica, Salesforce, Excel, Azure SQL Database, Data Warehousing, HIPAA Compliance Standards.

Projects

India imports and exports dashboard using Tableau. | *Tableau, excel*

- Integrated diverse data sources to provide a comprehensive view of India's import/export activities.

FIFA World Cup 2022 Analysis | *Microsoft SQL Server*

- Utilized SQL to analyze FIFA World Cup 2022 data, extracting insights on match statistics, player performance, and team strategies.

Disease Prediction and Drug Recommendation using Machine Learning | *Python, Excel*

- Built a disease prediction model using Python and scikit-learn with 90% accuracy, deploying it via Flask to recommend personalized drug treatments based on patient symptoms.

Technical Skills

Programming Languages: Python, SQL, Java, C/C++, R

Databases: MySQL, Oracle, PostgreSQL, MS SQL Server, Amazon Redshift, Snowflake

Cloud Platforms: Microsoft Azure (ADF, Synapse, Databricks), AWS (S3, Glue, Lambda, Athena)

ETL & Data Integration: Azure Data Factory, Informatica, Alteryx, SSIS, AWS Glue, Salesforce CRM

Data Warehousing & Modeling: Azure Synapse Analytics, Redshift, Snowflake, SSMS, Dimensional Modeling

Data Visualization & Reporting: Power BI, Tableau, Excel, SSRS

Machine Learning & Statistical Tools: Scikit-Learn, TensorFlow, PyTorch, Pandas, NumPy, R, Statistical Analysis

Development & DevOps Tools: Linux, Jenkins, Git, GitHub, Agile Methodology, SDLC, JIRA

Education

Florida International University (FIU)

Aug. 2022 – May 2024

Master of Science in Computer Science , Grade:3.87/4

Miami, Florida

IARE, India

Aug. 2016 – May 2020

Bachelors of Science in Computer Science, Grade:8.31/10

Hyderabad, India

Certification / Extracurricular Activities

- Data Analytics Essentials by Cisco. [\[certificate\]](#)
- Programming for Everybody (Getting Started with Python), Python Data Structures, Using Databases with Python by University of Michigan from Coursera [\[certificate\]](#) [\[certificate\]](#)
- Competed in Hackathon conducted by the LTIMINDTREE and are in top 10 teams to implement a project.
- HTML, CSS, and Javascript for Web Developers by Johns Hopkins University from coursera. [\[certificate\]](#)
